CONTACT

About the Trainer

Dr. Alfred Ang

Principal Trainer
Tertiary Infotech Academy Pte. Ltd.

ROLE

Principal Trainer, Tertiary Infotech Academy Pte. Ltd.

CERTIFICATION

Industry certified in the subject area of this course.

DELIVERS

Professional short courses for Tertiary Infotech Academy.

FOUNDER

Founder and lead instructor at Tertiary Infotech / Tertiary Courses.

Let's Know Each Other

1 Your name and organisation / role.

2 Your experience with this subject (if any).

3 What you want to be able to do after this course.

Ground Rules

1

Set your mobile phone to silent mode.

2

Participate actively — no question is too small.

3

Mutual respect: agree to disagree.

4

One conversation at a time.

5

Be punctual; return from breaks on time.

6

Learn by doing — try every hands-on lab.

Download Course Material

Portal: <https://lms-tms.tertiaryinfotech.com>

Lesson Plan — 1 Day, 8 hours/day

Day 1

- Day 1 — Build the Meridian Fresh pitch deck end to end with AI — set up an AI presentation toolkit and prompt library, research the topic and audience, shape a persuasive message and story, and turn it into a full slide-by-slide outline; then generate the slide content, design the deck with an AI slide generator, create charts, images and speaker notes, and rehearse and deliver it with confidence
 - Topic 1: Getting Started with Generative AI for Presentations (Labs 1–5)
 - Topic 2: Designing and Delivering AI-Powered Presentations (Labs 6–10)

Day 1

- Day 1 — Build the Meridian Fresh pitch deck end to end with AI — set up an AI presentation toolkit and prompt library, research the topic and audience, shape a persuasive message and story, and turn it into a full slide-by-slide outline; then generate the slide content, design the deck with an AI slide generator, create charts, images and speaker notes, and rehearse and deliver it with confidence
 - Topic 1: Getting Started with Generative AI for Presentations (Labs 1–5)
 - Topic 2: Designing and Delivering AI-Powered Presentations (Labs 6–10)
- Daily timing

– 9:30am–6:30pm · 1-hour lunch · tea breaks within training time

Learning Outcomes

1

AI presentation toolkit

Explain how generative AI supports business presentations, and set up an AI toolkit — general chat assistants (ChatGPT, Claude, Gemini) and an AI slide generator — for presentation work.

2

Prompting for slides

Write effective, structured prompts for presentation tasks and build a reusable prompt library.

3

Research & content

Use generative AI to research a topic and audience and gather validated, fact-checked content for a presentation.

4

Message & story

Shape a clear, audience-centred core message and narrative story for a business presentation with AI.

5

Presentation outline

Build a complete, slide-by-slide presentation outline from the story with AI.

6

Slide content & copy

Generate concise, on-message slide content and copy with AI, applying the 'one idea per slide' discipline.

Learning Outcomes (cont.)

7

AI slide design

Design professional slides with an AI slide generator and apply visual-design best practices.

8

Charts & data

Create clear, honest charts and data visuals from numbers with AI.

9

Images & speaker notes

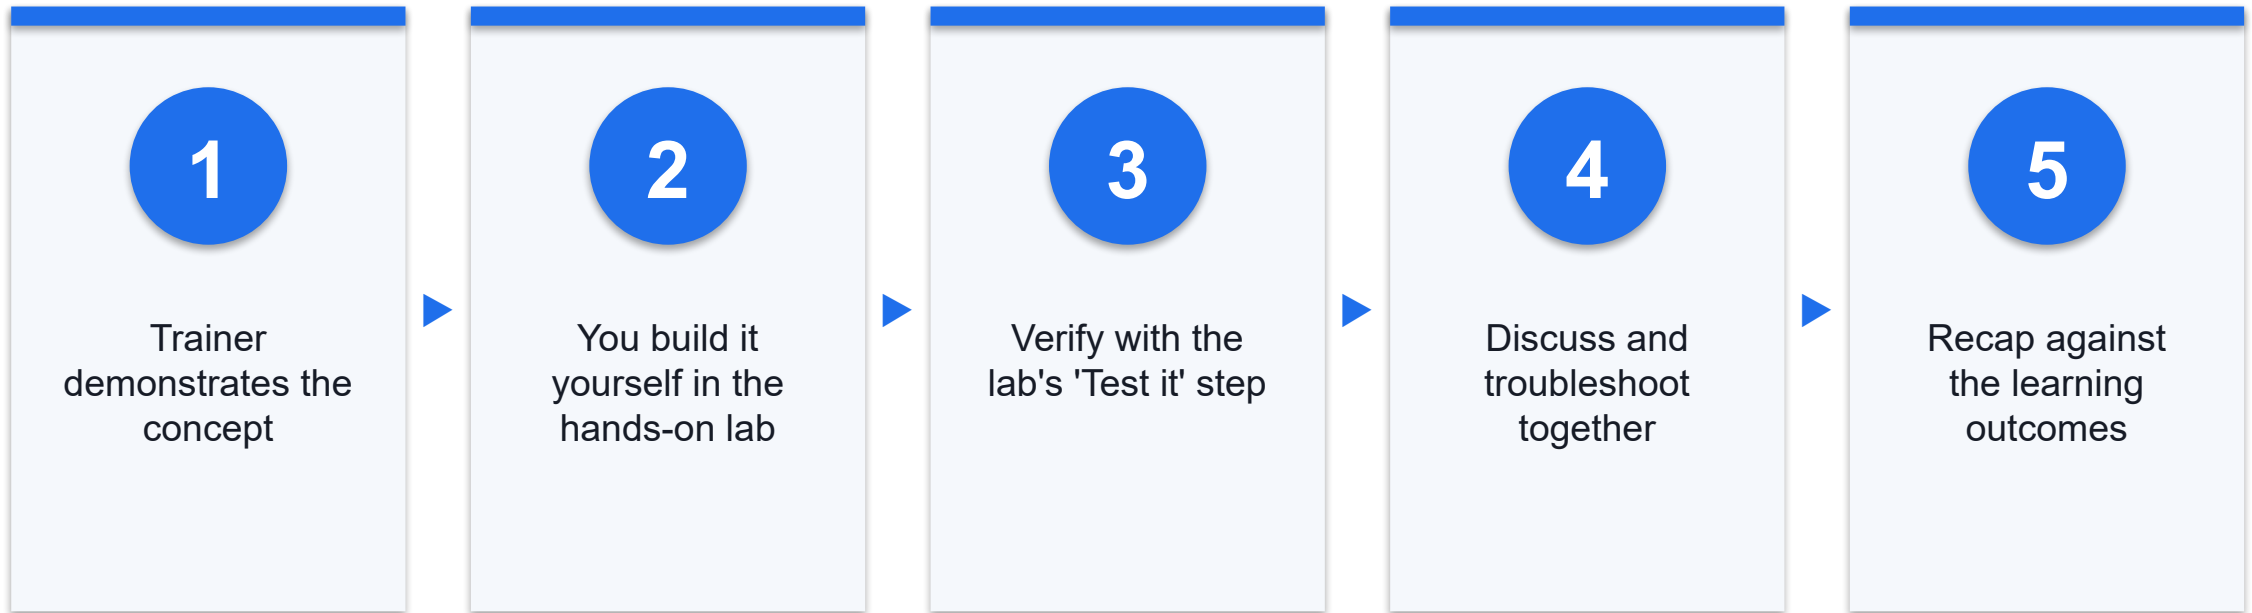

Create on-brand images and per-slide speaker notes with AI.

10

Rehearse & deliver

Rehearse and deliver the presentation with confidence using AI as a rehearsal partner, and finalise and export the deck.

How You'll Learn

CORE CONCEPTS

Course Fundamentals

What Generative AI for Presentations Really Is

1

A partner for the whole workflow — you describe a presentation task in words and AI returns a usable first draft (research, an outline, slide copy, a chart, images, speaker notes) in seconds, which you then refine.

2

Two toolsets, one deck — chat assistants (ChatGPT, Claude, Gemini) draft the thinking and words; AI slide generators (Gamma, Copilot, Canva) design the slides. You learn to move content smoothly between them.

3

Prompt, review, own — the workflow is always the same: give a structured prompt, review and correct the draft, and take ownership of the result. The AI drafts; you decide, fact-check and present.

4

Story before slides — the craft is not making slides faster; it is being clear on your audience, your one message and your story first, then using AI to build and design a deck that persuades.

The AI-Assisted Presentation Workflow

1

Research

Use AI to understand the audience, the topic and the key points, and gather fact-checked material — you supply and verify the real facts and numbers.

2

Structure

Shape one core message and a simple narrative arc, then a slide-by-slide outline, so the deck has a clear through-line before any design.

3

Generate

Turn the outline into concise slide copy, then let an AI slide generator design the deck, and create the charts, images and speaker notes.

4

Refine

Review every slide for message, design, honesty and clarity; tighten copy, fix charts and correct anything the AI invented.

5

Deliver

Rehearse with AI, prepare for questions and timing, finalise and export the deck, and present it with confidence — the delivery is yours.

THE PRESENTATION RULE

Generative AI gives you a fast first draft of every part of a presentation — the craft is prompting well, telling a clear story,

checking the facts, and delivering it

yourself with confidence.

This course is hands-on: you take one business presentation — the pitch deck for Meridian Fresh, a fictional Singapore healthy meal-kit startup seeking approval to expand into three new neighbourhoods — from a blank page to a finished, rehearsed deck, using ChatGPT, Claude, Gemini and an AI slide generator such as Gamma.

What You'll Build

An AI presentation toolkit

- ChatGPT, Claude, Gemini and Gamma set up
- A reusable presentation prompt library
- Fact-checked research on topic and audience

A clear message and story

- An audience and objective brief
- One core message and a narrative arc
- A complete slide-by-slide outline

A designed, AI-built deck

- Concise, on-message slide copy
- A professionally designed slide deck
- Honest charts and on-brand images

How Every Lab Works

1

The trainer demonstrates the AI technique on the shared Meridian Fresh example.

2

You run it yourself in ChatGPT, Claude, Gemini or your AI slide generator using the supplied Meridian Fresh brief.

3

You verify the result against the lab's explicit 'Test it' check.

4

You review and refine — correct the draft, fix any invented fact or figure, and adapt it — until it meets the standard.

5

You keep the reviewed output — each becomes the next part of your Meridian Fresh pitch deck.

TOPIC 01

Getting Started with Generative AI for Presentations

Introduction to generative AI for business presentations · Popular GenAI tools (ChatGPT, Claude and AI slide generators) · Writing effective prompts for presentations · Structuring your message and story

Key Concepts — Getting Started with Generative AI for Presentations

1

Generative AI for presentations — a generative AI assistant is a drafting and design partner across the whole presentation workflow; it researches, writes, structures, designs, illustrates and even helps you rehearse, turning hours of slide-making into a fast first draft you refine.

2

What AI is good (and not good) at — AI is strong at drafting text, structuring ideas, generating layouts and images and suggesting improvements; it does not know your real numbers, your audience or your intent, so you supply the facts and own every claim.

3

Two kinds of tool, one workflow — general chat assistants (ChatGPT, Claude, Gemini) draft the words, story and data; AI slide generators (Gamma, Microsoft Copilot in PowerPoint, Canva) turn that content into designed slides. A modern presentation workflow uses both together.

4

Popular GenAI tools — ChatGPT, Claude and Gemini all take a text prompt and return a draft; Gamma, Copilot and Canva generate and design slides from a prompt or outline. The prompting and review skills you learn here transfer across all of them.

5

The generate–review–refine loop — every AI task follows the same loop: you prompt, the AI drafts, you review it critically, and you refine with follow-up prompts and your own edits until it is right. This loop drives every lab in the course.

6

Prompting is the core skill — a good presentation prompt gives the AI a role, the context (audience, goal, tone), the exact task, the format you want back and any constraints; a vague ask gives a generic deck, a structured ask gives a usable one.

Key Concepts — Getting Started with Generative AI for Presentations (cont.)

7

A reusable prompt library — the same presentation tasks recur every time (research, outline, slide copy, speaker notes, Q&A prep), so you save your best prompts as reusable templates you can run for any future presentation.

8

Audience first — a business presentation exists to change what one specific audience thinks or does; before any slide you use AI to get clear on who they are, what they care about, and the single action you want from them.

9

Message and story — a strong presentation carries one core message supported by a simple narrative arc (for example situation → complication → solution → proof → ask); AI helps you find that through-line so the deck persuades rather than just informs.

10

Human judgement and honesty — AI drafts and suggests, but you check every fact and figure, remove anything invented (a 'hallucination'), keep confidential data out of public tools, and stand behind every claim you present.

Hands-On Labs — Getting Started with Generative AI for Presentations

Labs 1–2

- Set Up Your AI Presentation Toolkit
- Write Effective Prompts for Presentations

Labs 3–4

- Research Your Topic and Audience with AI
- Structure Your Message and Story

Lab 5

- Build the Presentation Outline with AI

Set Up Your AI Presentation Toolkit

LAB 1

This lab gets you comfortable with the tools before any real presentation work begins. You open the chat assistants (ChatGPT, Claude and Gemini), confirm you are signed in, and run a simple prompt so you see how each drafts presentation content, then run the same prompt in a second assistant to feel how they differ. You open an AI slide generator (Gamma), sign in, and generate a quick throwaway deck from a one-line prompt so you can see what a slide generator does. You note what AI is genuinely good at for presentations (a fast draft, structure, design) and where it needs you (real facts, your audience, your judgement). By the end you understand the describe -> generate -> review -> refine loop that is the heart of every lab. BUILDING BLOCK — what you create in this lab becomes part of your Meridian Fresh pitch deck. the connected

You'll build

Your AI presentation toolkit set up and tested — at least one chat assistant and one AI slide generator signed in and responding — a first throwaway AI-generated deck, and a clear, written understanding of the generate–review–refine loop and what AI can and cannot do for you.

tools: ChatGPT, Claude, Gemini, Gamma (AI slide generator), account sign-in, first prompts, comparing assistants, the generate–review–refine loop

Set Up Your AI Presentation Toolkit

STEP 1 OF 8

Create a project folder on your machine called 'Meridian-Fresh-Deck' so every file and note you make today stays together. Open ChatGPT (chat.openai.com), Claude (claude.ai) and Gemini (gemini.google.com) in browser tabs and confirm you are signed in to at least one.

Set Up Your AI Presentation Toolkit

STEP 2 OF 8

2

In one chat assistant, run a simple first prompt to see how it drafts presentation content. Paste the prompt below and read the reply.

\$ You are a presentation coach. In five short bullet points, explain what makes a business pitch deck persuasive to a startup's leadership team and an investor. Keep each bullet to one sentence.

Set Up Your AI Presentation Toolkit

STEP 3 OF 8

3

Run the exact same prompt in a second assistant and compare the two replies. Notice differences in tone, length and structure — the skill you learn transfers across all of them, so use whichever you prefer.

\$ You are a presentation coach. In five short bullet points, explain what makes a business pitch deck persuasive to a startup's leadership team and an investor. Keep each bullet to one sentence.

Set Up Your AI Presentation Toolkit

STEP 4 OF 8

4

Open the AI slide generator Gamma (gamma.app), sign in, and use 'Generate' to make a quick throwaway deck from a one-line prompt, so you can see what a slide generator produces. Paste the prompt below.

\$ A short five-slide business pitch deck for a healthy meal-kit startup expanding into new neighbourhoods, high level and clean.

Set Up Your AI Presentation Toolkit

STEP 5 OF 8

5

Look at what Gamma produced — designed slides with layout, theme, fonts and spacing generated in seconds. Note that it is a fast starting point, not a finished deck. You will not keep this one; it is only to feel the tool.

Set Up Your AI Presentation Toolkit

STEP 6 OF 8

A green circle with a white number 6 inside, indicating the current step in the process.

In one line each, write what the AI did well (fast draft, structure, instant design) and where it needs you (it does not know Meridian Fresh's real numbers, your audience, or your judgement). This good/not-good picture guides how you use AI all day.

Set Up Your AI Presentation Toolkit

STEP 7 OF 8

Open the supplied Meridian Fresh brief (labs/reference-pack/): the company story, the audience, the traction and financial figures, and the expansion plan. Skim it so you know the presentation you are about to build.

Set Up Your AI Presentation Toolkit

STEP 8 OF 8

8

Save your notes into your Meridian-Fresh-Deck folder. Write one line, in your own words, describing the generate -> review -> refine loop — you rely on it in every later lab.

Set Up Your AI Presentation Toolkit

Test it

You have signed in to at least one chat assistant and to an AI slide generator, run the same prompt in two assistants and compared them, generated a throwaway deck in Gamma, written a one-line note on what AI is and is not good at for presentations, skimmed the Meridian Fresh brief, and described the generate–review–refine loop in your own words — all saved in your Meridian-Fresh-Deck folder.

Write Effective Prompts for Presentations

LAB 2

A good result starts with a good prompt, not a lucky one. In this lab you read the Meridian Fresh brief and write a deliberately vague prompt first, so you see how generic the result is. You then rebuild it with five clear parts — a role for the AI, the context (audience, goal, tone), the exact task, the format you want back, and any constraints — and watch the draft become genuinely usable. You run small single-change edits to feel how each part matters, then save your best versions as a reusable prompt library with clearly marked slots, covering the tasks you repeat for every presentation: research, outline, slide copy, speaker notes and Q&A prep. **BUILDING BLOCK** — what you create in this lab becomes part of your Meridian Fresh pitch deck. the connected presentation you assemble across all 10 labs.

You'll build

A structured presentation prompt built from role, context, task, format and constraints, plus a reusable prompt library with clearly marked slots for the recurring presentation tasks, saved in your project folder

Tools: ChatGPT, Claude, Gemini, the structured prompt framework (role, context, task, format, constraints), prompt iteration, a reusable prompt library

Write Effective Prompts for Presentations

STEP 1 OF 7

1

Open the Meridian Fresh brief and note two things you will reuse in every prompt: who the audience is (the leadership team plus an investor) and the goal (approve the expansion).

Write Effective Prompts for Presentations

STEP 2 OF 7

2

Write a deliberately vague first prompt in any assistant and generate, so you can see the generic result. Paste the prompt below and read how unfocused the reply is.

\$ Write a pitch deck for a meal-kit company.

Write Effective Prompts for Presentations

STEP 3 OF 7

3

Rebuild the prompt with a role and the context, and regenerate. Paste the prompt below and compare it with the vague version.

\$ You are an experienced startup pitch-deck writer. Context: Meridian Fresh is a Singapore healthy meal-kit startup with two strong years in one neighbourhood, now seeking its leadership team's and an investor's approval to expand into three more. Draft the high-level sections a persuasive expansion pitch deck should contain.

Write Effective Prompts for Presentations

STEP 4 OF 7

4

Now add the exact task, the format you want back, and clear constraints, and regenerate. Paste the prompt below.

\$ As the same pitch-deck writer, list the 10 to 12 slides this deck should have. For each slide give a headline that states the slide's point and one line on what it should contain. Present it as a numbered list, keep it concise, and do not invent specific financial figures — leave clear placeholders where real numbers are needed.

Write Effective Prompts for Presentations

STEP 5 OF 7

5

Put the vague result and the structured result side by side. Note in one line how much more usable the structured prompt was — this is the core lesson of the day.

Write Effective Prompts for Presentations

STEP 6 OF 7

A green circle with a white number 6 inside, indicating the current step in the process.

Run two or three single-change edits to feel how each part steers the result — for example change the audience to 'a room of potential customers', or change the tone to 'formal and data-heavy' — and note which you would keep for Meridian Fresh.

Write Effective Prompts for Presentations

STEP 7 OF 7

7

Save a reusable prompt library in your project folder: templates for research, outline, slide copy, speaker notes and Q&A prep, each with clearly marked slots — [ROLE], [CONTEXT], [AUDIENCE], [TASK], [FORMAT], [CONSTRAINTS] — that you fill in for any future presentation.

Write Effective Prompts for Presentations

Test it

You have compared a vague prompt with a structured one built from role, context, task, format and constraints, seen how much better the structured prompt performs, run single-change edits to feel each part, and saved a reusable prompt library with marked slots for the recurring presentation tasks in your project folder.

Research Your Topic and Audience with AI

LAB 3

A persuasive deck rests on understanding the audience and getting the facts right. In this lab you use a chat assistant to profile your audience (the leadership team and a visiting investor), surface the questions they will ask and what would make them say yes or no, and research the meal-kit market and the problem it solves at a high level. Crucially, you then fact-check: you ask the AI to label which of its own claims and numbers are reliable and which you must verify, and you cross-check every figure against the supplied Meridian Fresh brief — replacing anything the AI invented with the brief's real numbers or a clear [VERIFY] placeholder. This is where you learn to use AI for research without letting it make up your facts. BUILDING BLOCK — what you create in this lab becomes part of your Meridian Fresh pitch deck. the connected

You'll build

An audience profile, a short researched brief of the market and the problem with the key supporting points, and a fact-check pass that labels every claim and number as verified, needing a source, or taken from the supplied brief.

Tools: ChatGPT / Claude / Gemini, audience analysis, topic research, source and fact checking, separating supplied facts from AI-generated claims

Research Your Topic and Audience with AI

STEP 1 OF 7

1

Open the Meridian Fresh brief and note the audience: the leadership team plus one visiting investor at the quarterly strategy review.

Research Your Topic and Audience with AI

STEP 2 OF 7

2

Profile the audience with AI so you know what will land. Paste the prompt below.

\$ You are a communications strategist. My audience is the leadership team of a small Singapore startup plus one visiting investor, at a quarterly strategy review. Profile this audience: what they care about, what they already know, their likely priorities and concerns, and the tone that would land best. Keep it to a short, structured summary.

Research Your Topic and Audience with AI

STEP 3 OF 7

3

Ask what this audience will probe, so you can prepare. Paste the prompt below.

\$ For that same audience and a proposal to expand a meal-kit business into three new neighbourhoods, list the eight toughest questions they are likely to ask, and note what each question is really testing.

Research Your Topic and Audience with AI

STEP 4 OF 7

4

Research the problem and market at a high level, keeping general knowledge separate from anything that needs a source. Paste the prompt below.

\$ Give me a concise, neutral briefing on the healthy meal-kit market and the problem it solves for busy urban professionals. Clearly separate widely-accepted general points from anything that would need a specific source or a recent statistic. Do not invent precise figures.

Research Your Topic and Audience with AI

STEP 5 OF 7

5

Fact-check the AI's own briefing — this is the key step. Paste the prompt below and read the labels critically.

\$ Review the briefing you just gave me. For each factual claim or number, label it [GENERAL KNOWLEDGE], [NEEDS A SOURCE], or [POSSIBLY OUTDATED], and tell me which ones I must verify myself before putting them in a pitch deck.

Research Your Topic and Audience with AI

STEP 6 OF 7

6

Cross-check every figure against the supplied Meridian Fresh brief. Use the brief's real traction and financial numbers, and replace any figure the AI invented with the brief's value or a clear [VERIFY] placeholder. Never present an AI-invented number as fact.

Research Your Topic and Audience with AI

STEP 7 OF 7

Save three things in your project folder: the audience profile, the short researched brief of the market and problem, and your fact-check notes marking what is verified, what needs a source, and what came from the brief.

Research Your Topic and Audience with AI

Test it

You have used AI to profile the audience and surface their toughest questions, researched the market and problem, run a fact-check pass that labels each claim, and cross-checked every figure against the supplied brief — replacing invented numbers with the brief's real figures or a [VERIFY] placeholder — all saved in your project folder.

Structure Your Message and Story

LAB 4

Slides come later; the story comes first. In this lab you use AI to draft the presentation's core message — the single sentence you want the audience to remember, which is really your ask — generating a few options and refining one. You then ask the AI for two or three alternative narrative structures (for example Situation → Complication → Solution → Proof → Ask, or Problem → Solution → Proof), choose the arc that fits Meridian Fresh, and map your intended sections onto it. Finally you pressure-test the story: you ask the AI which sections do not support the core message so you can cut or merge them, leaving a tight story that flows from a hook to a clear ask. **BUILDING BLOCK** — what you create in this lab becomes part of your Meridian Fresh pitch deck. the connected presentation you assemble across all 10 labs.

You'll build

One clear, one-sentence core message and a chosen narrative arc (for example situation → complication → solution → proof → ask) for the Meridian Fresh deck, with each planned section mapped to the part of the story it carries.

Tools: ChatGPT / Claude / Gemini, core message drafting, narrative arc and storytelling structures (SCR, problem–solution–proof–ask), message testing

Structure Your Message and Story

STEP 1 OF 7

1

Bring the audience profile and the objective from Lab 3 to hand — the story has to serve that audience and that ask.

Structure Your Message and Story

STEP 2 OF 7

2

Draft the core message with AI: the one thing the audience should remember. Paste the prompt below, then pick and refine the strongest option.

\$ You are a presentation storytelling coach. In one sentence each, give me three options for the single core message a Meridian Fresh expansion pitch should leave in the audience's mind — the one thing they remember. Make them specific and persuasive, not generic.

Structure Your Message and Story

STEP 3 OF 7

3

Ask for alternative story structures and when each works. Paste the prompt below.

\$ Suggest three ways to structure this pitch as a story — for example Situation–Complication–Resolution, or Problem–Solution–Proof–Ask. For each, give the sequence of sections and one line on when it works best.

Structure Your Message and Story

STEP 4 OF 7

4

Choose one arc and have AI map your sections onto it. Paste the prompt below.

\$ I'll use a Situation → Complication → Solution → Proof → Ask arc. Map a Meridian Fresh expansion pitch onto it: for each stage, say which section or slide belongs there and the single point it makes.

Structure Your Message and Story

STEP 5 OF 7

5

Pressure-test the story so it stays tight. Paste the prompt below, filling in your planned sections and message.

\$ Here is my planned section list: [PASTE SECTIONS]. Which of these do not clearly support my core message '[PASTE MESSAGE]', and which could I cut or merge to make the story tighter?

Structure Your Message and Story

STEP 6 OF 7

6

Refine: cut or merge the weak sections the AI flagged, and confirm the story flows from an opening hook to a clear closing ask, with each section earning its place.

Structure Your Message and Story

STEP 7 OF 7

Save your final core message, the chosen narrative arc, and the section-to-story map in your project folder — this is the spine you turn into a slide outline in Lab 5.

Structure Your Message and Story

Test it

You have a single, clear one-sentence core message, a chosen narrative arc, and a map of each section to the part of the story it carries — pressure-tested so every section supports the message — saved in your project folder.

Build the Presentation Outline with AI

LAB 5

Now you bring the research, the message and the arc together into one concrete plan. In this lab you prompt the AI to produce a slide-by-slide outline for the roughly twelve-slide deck: for each slide, a headline written as the point it makes, two or three supporting bullets, and a suggested visual. You review it hard — rewriting any topic-label headline into a real message, enforcing one idea per slide, marking where charts and images belong, and inserting the brief's real figures as placeholders for the data slide. You check the flow and length so the deck opens with a hook and closes with the ask. This outline is the spine of everything you design, write and rehearse in Topic 2. BUILDING BLOCK — what you create in this lab becomes part of your Meridian Fresh pitch deck. the connected presentation you assemble across all 10 labs.

You'll build

A complete, slide-by-slide outline for the roughly twelve-slide Meridian Fresh deck — each slide with a message headline, two or three supporting points and a suggested visual — reviewed for one idea per slide and a clear hook-to-ask flow, ready to design in Topic 2.

Tools: ChatGPT / Claude / Gemini, slide-by-slide outlining, headline-as-message, one idea per slide, mapping visuals and data placeholders

Build the Presentation Outline with AI

STEP 1 OF 7

Gather your inputs from Labs 3-4: the core message, the narrative arc and section map, and the fact-checked research and figures.

Build the Presentation Outline with AI

STEP 2 OF 7

2

Prompt the AI to produce the full slide-by-slide outline. Paste the prompt below, filling in your message, arc and points.

\$ You are a pitch-deck writer. Using this core message: '[PASTE MESSAGE]', this story arc: '[PASTE ARC]', and these researched points and figures: '[PASTE POINTS]', produce a slide-by-slide outline for a 10 to 12 slide Meridian Fresh expansion pitch. For each slide give: (1) a headline written as the point the slide makes, (2) two or three supporting bullet points, (3) a suggested visual — chart, image, diagram or none. Number the slides.

Build the Presentation Outline with AI

STEP 3 OF 7

3

Fix the headlines: make every one a message, not a topic label.
Paste the prompt below.

\$ Review the slide headlines in this outline. Rewrite any that are topic labels (like 'Market' or 'Financials') into headlines that state the actual point (like 'The healthy meal-kit market is growing fast'). Return the revised outline.

Build the Presentation Outline with AI

STEP 4 OF 7

4

Enforce one idea per slide: split any slide carrying two ideas into two, and merge any thin slide into its neighbour, so each slide makes exactly one point.

Build the Presentation Outline with AI

STEP 5 OF 7

5

Mark the visuals: confirm which slide carries the data chart and which carry images, and paste the brief's real figures into the chart slide as a placeholder so you have them ready for Lab 8.

Build the Presentation Outline with AI

STEP 6 OF 7

6

Check flow and length: aim for about 10 to 12 slides, confirm it opens with a hook and closes with the ask, and read the headlines alone top to bottom — they should tell the whole story on their own.

Build the Presentation Outline with AI

STEP 7 OF 7

Save the final outline in your project folder. This is the spine of your deck — you generate its copy in Lab 6, design it in Lab 7, and add charts, images and notes in Labs 8-9.

Build the Presentation Outline with AI

Test it

You have a complete, numbered slide-by-slide outline of about 10 to 12 slides, every headline written as a message, one idea per slide, with charts and images marked and the brief's real figures placed on the data slide — and reading the headlines alone tells the whole story from hook to ask. Saved in your project folder.

Recap — Getting Started with Generative AI for Presentations

1

You can now: Sign in to ChatGPT, Claude, Gemini and an AI slide generator (Gamma), run your first prompts, and learn the generate–review–refine loop that every later lab uses.

2

You can now: Turn a vague ask into a strong, structured prompt (role, context, task, format, constraints) for presentation tasks, and save a reusable prompt library for the work you repeat every deck.

3

You can now: Use AI to research the audience, the topic and the key points, gather supporting material, and fact-check it so the deck stands on solid, honest ground rather than invented figures.

4

You can now: Use AI to find one clear core message and a simple, audience-centred narrative arc, so the presentation persuades rather than just informs — before you build a single slide.

5

You can now: Turn the message and story into a complete, slide-by-slide outline — each slide's headline message, supporting points and suggested visual — that you will design in Topic 2.

TOPIC 02

Designing and Delivering AI-Powered Presentations

Generating slide content and visuals · Designing professional slides with AI · Creating charts, images and speaker notes · Rehearsing and delivering with confidence

Key Concepts — Designing and Delivering AI-Powered Presentations

1

From outline to slide content — AI turns your approved outline into concrete slide copy: a clear headline that states the slide's one idea, a few tight supporting points, and no wall of text; you enforce 'one message per slide'.

2

Writing for slides, not documents — AI helps you cut wordy paragraphs to scannable phrases, sharpen each headline into a message rather than a topic, and keep a consistent, professional tone across every slide.

3

AI slide generators — tools such as Gamma, Microsoft Copilot in PowerPoint and Canva take a prompt or an outline and generate a fully designed deck — layouts, theme, fonts and spacing — in seconds, giving you a polished starting point to refine.

4

Designing professional slides — good slides follow simple rules (clear hierarchy, generous white space, consistent colour and type, one idea per slide); the AI applies a theme and layout, and you refine so each slide is clean, readable and on-brand.

5

Charts and data visuals — AI helps you turn numbers into the right chart (a trend as a line, parts of a whole as a bar or stacked bar, comparisons as columns), titled and labelled so the chart makes your point at a glance.

6

Honest data visualisation — AI can format a chart, but you make sure it is truthful: correct numbers, an un-manipulated axis starting at a sensible baseline, and a title that states the real takeaway rather than overselling it.

Key Concepts — Designing and Delivering AI-Powered Presentations (cont.)

7

Images and visuals — AI image generation and stock/icon tools produce on-brand images, icons and backgrounds that support the message; a visual should illustrate the point, not decorate the slide for its own sake.

8

Speaker notes and script — AI drafts speaker notes or a talking script for each slide, so you say more than the slide shows, keep to time, and sound natural instead of reading bullets aloud.

9

Rehearsing with AI — you use AI as a rehearsal partner: it anticipates the audience's tough questions, drills your answers, tightens your timing and flow, and gives feedback on clarity so you deliver with confidence.

10

Delivering and finalising — you finalise and export the deck, prepare a delivery cheat-sheet and a Q&A crib, and remember the room, not the AI, carries the presentation: the tools prepared you, but the delivery is yours.

Hands-On Labs — Designing and Delivering AI-Powered Presentations

Labs 6–7

- Generate Slide Content and Copy with AI
- Design Professional Slides with an AI Slide Generator

Labs 8–9

- Create Charts and Data Visuals with AI
- Create Images and Speaker Notes with AI

Lab 10

- Rehearse and Deliver with Confidence

Generate Slide Content and Copy with AI

LAB 6

With the outline agreed, you write the words that actually go on the slides. In this lab you feed your Lab 5 outline to a chat assistant and have it draft per-slide copy: a headline that states the slide's one point and up to four short supporting bullets. You then edit hard — this is where the discipline lives. You check each slide carries one idea, ask the AI to cut every bullet to a scannable phrase, run a consistency pass so the tone and voice match across the deck, and remove or mark any claim or number you cannot back with the brief. The result is clean, on-message copy ready to pour into an AI slide generator in Lab 7. **BUILDING BLOCK** — what you create in this lab becomes part of your Meridian Fresh pitch deck, the connected presentation you assemble across all 10 labs.

You'll build

Concise, on-message slide copy for every slide of the Meridian Fresh deck — a headline and a few tight supporting points each — edited for one idea per slide and a consistent, professional tone.

Tools: ChatGPT / Claude / Gemini, slide copywriting, headline writing, bullet tightening, one idea per slide, consistent tone

Generate Slide Content and Copy with AI

STEP 1 OF 7

Open your Lab 5 slide-by-slide outline — it is the input for every step of this lab.

Generate Slide Content and Copy with AI

STEP 2 OF 7

2

Generate the slide copy for the whole deck. Paste the prompt below, with your outline pasted in.

\$ You are a slide copywriter. For each slide in this outline: '[PASTE OUTLINE]', write the on-slide copy — a headline that states the slide's one point, and up to four short supporting bullets. Do not write paragraphs; this is text for slides, not a document.

Generate Slide Content and Copy with AI

STEP 3 OF 7

A green circle with a white number 3 inside, indicating the third step of the process.

Review each slide for one idea. If a slide's copy is really making two points, split it into two slides; if a slide is thin, merge it into a neighbour. The copy must respect one idea per slide.

Generate Slide Content and Copy with AI

STEP 4 OF 7

4

Tighten every bullet. Paste the prompt below.

\$ Tighten this slide copy: cut every bullet to a scannable phrase of at most about eight words, keep the meaning, and remove filler words. Return the revised copy.

Generate Slide Content and Copy with AI

STEP 5 OF 7

5

Run a consistency pass. Paste the prompt below.

\$ Make the tone consistent and professional across all slides, and flag any bullet that is really two ideas so I can split it onto separate slides.

Generate Slide Content and Copy with AI

STEP 6 OF 7

A green circle with a white number 6 inside, indicating the current step in the process.

Do an honesty pass: remove or replace any claim or number you cannot back with the Meridian Fresh brief, inserting a clear [VERIFY] placeholder where you still need to confirm a figure. Nothing you cannot defend stays on a slide.

Generate Slide Content and Copy with AI

STEP 7 OF 7

Save the finished slide copy in your project folder. This is exactly what you pour into the AI slide generator in Lab 7.

Generate Slide Content and Copy with AI

Test it

You have concise, on-message copy for every slide — a message headline plus a few tight bullets — respecting one idea per slide, with a consistent professional tone and every unverifiable claim removed or marked [VERIFY]. Saved and ready to design.

Design Professional Slides with an AI Slide Generator

LAB 7

Now you turn the words into a designed deck. In this lab you paste your Lab 6 slide copy into Gamma (Microsoft Copilot in PowerPoint or Canva work the same way) and generate a fully designed presentation — layouts, theme, fonts and spacing — in seconds. You choose a theme whose colours and fonts suit Meridian Fresh: fresh, healthy and premium but approachable. Then you refine, because a generated deck is a strong start, not the finish: you fix any slide that breaks one-idea-per-slide, improve the visual hierarchy so the headline reads first, add generous white space, and make headings, alignment and spacing consistent across every slide. You leave clear placeholders where the chart and images will go. BUILDING BLOCK — what you create in this lab becomes part of your Meridian Fresh pitch deck. the connected

You'll build

A professionally designed Meridian Fresh deck generated with an AI slide generator, with a consistent theme (colours, fonts, spacing) and each slide refined for clear visual hierarchy, generous white space and one idea per slide — with placeholders where the chart and images belong.

Design Professional Slides with an AI Slide Generator

STEP 1 OF 7

Open Gamma (gamma.app), start a new presentation, and choose the option to generate from pasted text or an outline (in Copilot or Canva, choose the equivalent 'create from outline / text' option).

Design Professional Slides with an AI Slide Generator

STEP 2 OF 7

2

Paste your Lab 6 slide copy and generate the deck, guiding the design with a short instruction. Paste the instruction below along with your copy.

\$ Generate a clean, professional business pitch deck from this content. Keep one idea per slide, minimal text, a clear headline on each slide, and leave room for a chart and images. [PASTE SLIDE COPY]

Design Professional Slides with an AI Slide Generator

STEP 3 OF 7

3

Choose a theme whose colours and fonts suit Meridian Fresh — fresh and healthy, premium but approachable (for example a clean green-and-neutral palette with a friendly, readable font) — and apply it across all slides so the deck is unified.

Design Professional Slides with an AI Slide Generator

STEP 4 OF 7

4

Refine the layout slide by slide: confirm one idea per slide, make the headline the most prominent element (clear visual hierarchy), and give each slide generous white space so it is not cramped. Change the card or layout on any slide that is too busy.

Design Professional Slides with an AI Slide Generator

STEP 5 OF 7

A green circle with a white number 5 inside, indicating the fifth step in a sequence.

Make it consistent: the same heading style, alignment and spacing on every slide, and remove any clutter or default filler text the generator added. Consistency is what makes a deck look professional.

Design Professional Slides with an AI Slide Generator

STEP 6 OF 7

A green circle with a white number 6 inside, indicating the current step in the process.

Leave clear placeholders where the outline marked a chart (the data slide) and images (title, problem, solution, expansion). You build the chart in Lab 8 and add images in Lab 9.

Design Professional Slides with an AI Slide Generator

STEP 7 OF 7

Name and save the deck in your slide generator (for example 'Meridian Fresh — Expansion Pitch'). This designed deck is the canvas for the rest of the course.

Design Professional Slides with an AI Slide Generator

Test it

You have generated a designed Meridian Fresh deck with an AI slide generator, applied a consistent on-brand theme, refined every slide for one idea per slide, clear hierarchy and white space, made headings and spacing consistent, and left clear placeholders for the chart and images — saved in the tool.

Create Charts and Data Visuals with AI

LAB 8

A pitch needs a convincing data slide, and this is where honesty matters most. In this lab you take the real traction and financial figures from the Meridian Fresh brief, ask the AI which chart type best carries your message and why, and have it structure the numbers into a clean table — without changing a single figure. You create the chart in your slide tool (or in Excel/Sheets and paste it in), title it as its takeaway rather than a label, and label the axes and units. Then you run an honesty check: you ask the AI to critique the chart for anything misleading — a truncated axis, a cherry-picked range, an overstated title — and you fix it, so the chart makes your point truthfully. BUILDING BLOCK — what you create in this lab becomes part of your Meridian Fresh pitch deck. the connected presentation you assemble across all 10 labs.

You'll build

One clear, honest chart built from the Meridian Fresh figures — the right chart type for the message, titled as its takeaway and correctly labelled — placed on the data slide of the deck.

Tools: ChatGPT / Claude / Gemini, Gamma / Canva / Excel charts, choosing a chart type, chart titling and labelling, honest data visualisation

Create Charts and Data Visuals with AI

STEP 1 OF 7

Open the Meridian Fresh brief and copy out the real figures you will chart — for example the subscriber or revenue numbers over the last eight quarters, and the expansion projection. Keep the numbers exactly as the brief states them.

Create Charts and Data Visuals with AI

STEP 2 OF 7

2

Ask the AI which chart type fits your message. Paste the prompt below.

\$ I want to show that Meridian Fresh's subscriber base has grown steadily over eight quarters. Which chart type best communicates a trend over time to a leadership audience, and why? Suggest a clear title that states the takeaway.

Create Charts and Data Visuals with AI

STEP 3 OF 7

3

Have the AI structure your numbers into a clean table, without changing them. Paste the prompt below with your figures.

\$ Here are my figures: [PASTE FIGURES FROM BRIEF]. Put them into a clean table ready to turn into a chart. Do not change any number; if anything is unclear, ask rather than guess.

Create Charts and Data Visuals with AI

STEP 4 OF 7

4

Create the chart: in Gamma or Canva insert a chart and enter the table, or build it in Excel/Google Sheets and paste it onto the slide. Choose the chart type the AI recommended and confirm every value matches the brief.

Create Charts and Data Visuals with AI

STEP 5 OF 7

5

Title the chart as its takeaway, not a label — for example 'Subscribers grew three-fold in two years' rather than 'Subscribers' — and label the axes with their units so the chart is readable on its own.

Create Charts and Data Visuals with AI

STEP 6 OF 7

6

Run the honesty check. Paste the prompt below and fix whatever it flags.

\$ Critique this chart for honesty and clarity: is the axis baseline sensible, is the time range fair, is anything exaggerated or missing, and does the title match the data? Suggest fixes.

Create Charts and Data Visuals with AI

STEP 7 OF 7

Place the finished, corrected chart on the data slide of your deck and save. The chart should make your growth point truthfully and at a glance.

Create Charts and Data Visuals with AI

Test it

You have chosen the right chart type for your message, built the chart from the brief's exact figures, titled it as its takeaway and labelled the axes, run an honesty check and fixed any misleading element, and placed the finished chart on the data slide of the deck.

Create Images and Speaker Notes with AI

LAB 9

Two finishing layers turn a designed deck into one you can stand up and deliver. First, you use AI image generation (DALL·E in ChatGPT, or the image tools in Gamma or Canva) to create on-brand visuals for the key slides — title, problem, solution and expansion — keeping the style consistent and making sure each image supports the point rather than decorating the slide. You check the images are appropriate and licence-clear (no real logos or identifiable people) and disclose AI use where appropriate. Then you generate speaker notes for every slide: a short spoken script in your own voice, timed to your slot, that says more than the slide shows so you never simply read the bullets. **BUILDING BLOCK** — what you create in this lab becomes part of your Meridian Fresh pitch deck. the connected presentation you assemble across all 10 labs.

You'll build

On-brand images placed on the key slides (supporting the message, appropriate and licence-checked), plus concise per-slide speaker notes or a script that let you present without reading the slides and keep to time.

Tools: AI image generation (DALL·E, Gamma, Canva), image prompting, image licensing and appropriateness check, speaker-notes / script generation, timing

Create Images and Speaker Notes with AI

STEP 1 OF 7

Decide which slides need an image — usually the title, the problem, the solution and the expansion slides — and note in one line what each image should show and the mood it should set.

Create Images and Speaker Notes with AI

STEP 2 OF 7

2

Generate an on-brand image for one slide. Paste the image prompt below into your image tool.

\$ A clean, warm, photographic-style image of a freshly prepared healthy meal kit with fresh vegetables on a bright kitchen counter, appetising and premium but approachable, no text and no logos, suitable as a title-slide background for a food brand.

Create Images and Speaker Notes with AI

STEP 3 OF 7

3

Generate the other images the same way, keeping the style consistent (same look, lighting and palette) so the deck feels like one brand. Check each image genuinely supports its slide's point rather than just decorating it.

Create Images and Speaker Notes with AI

STEP 4 OF 7

4

Check appropriateness and licensing: no real company logos or identifiable real people, confirm your tool's usage terms allow business use, and note where you will disclose that images are AI-generated. Replace anything you are unsure about.

Create Images and Speaker Notes with AI

STEP 5 OF 7

A green circle with a white number 5 inside, indicating the current step in the process.

Place the images on their slides, keeping the layout clean — the image supports the headline, it does not bury it. Adjust size and position so text stays readable.

Create Images and Speaker Notes with AI

STEP 6 OF 7

6

Generate per-slide speaker notes. Paste the prompt below with your outline or slide copy.

\$ You are a presentation coach. For each slide in this deck: '[PASTE OUTLINE OR COPY]', write speaker notes of two or three sentences that expand on the slide without repeating the bullets, in a warm, confident spoken voice. Note roughly how many seconds each slide should take so the whole talk fits in 12 minutes.

Create Images and Speaker Notes with AI

STEP 7 OF 7

Review the notes: make sure they sound like you, fit your time slot, and add to the slide rather than reading it. Trim anything that overruns, then save the deck with its images and speaker notes.

Create Images and Speaker Notes with AI

Test it

You have generated consistent, on-brand images that support the key slides and are appropriate and licence-checked, placed them cleanly, and drafted concise per-slide speaker notes timed to a 12-minute talk that expand on the slides rather than repeat them — all saved with the deck.

Rehearse and Deliver with Confidence

LAB 10

The last mile is delivery, and AI makes a strong rehearsal partner. In this lab you give the AI a short summary of your deck, then run a mock Q&A in which it plays a sceptical investor and drills you with hard questions one at a time. You build a Q&A crib of the likely questions and honest answers in your own words, get feedback on where the story drags or where you will overrun your time, and turn that into a one-page delivery cheat-sheet — your opening line, key transitions, the ask, and per-section timing. Finally you finalise the deck with a proofreading and consistency pass, confirm every fact and figure is verified, and export it (PowerPoint or PDF). That completes the Meridian Fresh pitch deck, end to end. **BUILDING BLOCK** — what you create in this lab becomes part of your Meridian Fresh pitch deck. the connected presentation you assemble

You'll build

A rehearsed presentation — a Q&A crib of likely questions and your answers, a one-page delivery cheat-sheet (opening, transitions, timing, the ask), a final proofread and consistency pass, and the finished Meridian Fresh deck exported (PowerPoint or PDF)

Tools: ChatGPT / Claude / Gemini as a rehearsal partner, mock Q&A, timing and flow feedback, a Q&A crib, a delivery cheat-sheet, finalising and exporting the deck

ready to present.

Rehearse and Deliver with Confidence

STEP 1 OF 7

1

Write a short summary of your deck — the core message, the sections in order, and the ask — to give the AI the context it needs to rehearse you well.

Rehearse and Deliver with Confidence

STEP 2 OF 7

2

Run a live mock Q&A. Paste the prompt below and answer each question out loud before reading the next.

\$ You are a sceptical investor at a startup strategy review. I'm pitching Meridian Fresh's expansion into three neighbourhoods. Ask me your toughest questions one at a time, wait for my answer, then push back if it is weak. Start now.

Rehearse and Deliver with Confidence

STEP 3 OF 7

3

Build a Q&A crib. Paste the prompt below, then edit the answers into your own words.

\$ Based on this deck summary: '[PASTE SUMMARY]', list the ten questions this audience is most likely to ask, and draft a concise, honest answer to each that I can adapt into my own words.

Rehearse and Deliver with Confidence

STEP 4 OF 7

4

Get flow and timing feedback. Paste the prompt below with your outline and notes.

\$ Here is my outline and speaker notes: '[PASTE]'. My slot is 12 minutes plus Q&A. Tell me where the story drags, where I risk running over time, and what to cut or shorten.

Rehearse and Deliver with Confidence

STEP 5 OF 7

5

Build a one-page delivery cheat-sheet: your opening line, the key transitions between sections, the exact wording of your ask, and a per-section timing plan so you land inside 12 minutes.

Rehearse and Deliver with Confidence

STEP 6 OF 7

6

Finalise the deck. Paste the prompt below to proofread, fix what it finds, and confirm every fact and number is verified against the brief with no [VERIFY] placeholders left.

\$ Proofread all the copy in this deck: '[PASTE COPY]'. Fix spelling, grammar and inconsistent capitalisation or tone, and flag any claim that sounds too strong to defend. Return a clean version.

Rehearse and Deliver with Confidence

STEP 7 OF 7

Export the finished deck (PowerPoint or PDF from Gamma) and save it with your cheat-sheet and Q&A crib in your project folder. This complete, rehearsed presentation is the deliverable the whole course set out to build — and remember, the room carries the talk, not the AI.

Rehearse and Deliver with Confidence

Test it

You have rehearsed with a mock Q&A, built a Q&A crib and a one-page delivery cheat-sheet, tightened the story and timing to fit 12 minutes, proofread and finalised the deck with every figure verified and no [VERIFY] placeholders left, and exported the finished Meridian Fresh pitch deck (PowerPoint or PDF) ready to present.

Recap — Designing and Delivering AI-Powered Presentations

1

You can now: Turn the approved outline into concrete slide copy — a message headline and a few tight supporting points per slide — applying 'one idea per slide' and cutting every wall of text.

2

You can now: Import your outline and copy into an AI slide generator (Gamma, or Copilot/Canva), generate a designed deck, apply a consistent theme, and refine the layout using visual-design best practices.

3

You can now: Turn the Meridian Fresh figures into one clear, honest chart — the right type, titled and labelled to make its point — and place it on the data slide of the deck.

4

You can now: Generate on-brand images that support the message and draft per-slide speaker notes, so the slides look right and you can present them without reading the bullets aloud.

5

You can now: Use AI as a rehearsal partner to anticipate tough questions, tighten timing and flow, build a Q&A crib and a delivery cheat-sheet, then finalise and export the deck ready to present.

WRAP-UP

Course Summary & Next Steps

What You Achieved

1

AI presentation toolkit

Explain how generative AI supports business presentations, and set up an AI toolkit — general chat assistants (ChatGPT, Claude, Gemini) and an AI slide generator — for presentation work.

2

Prompting for slides

Write effective, structured prompts for presentation tasks and build a reusable prompt library.

3

Research & content

Use generative AI to research a topic and audience and gather validated, fact-checked content for a presentation.

4

Message & story

Shape a clear, audience-centred core message and narrative story for a business presentation with AI.

5

Presentation outline

Build a complete, slide-by-slide presentation outline from the story with AI.

6

Slide content & copy

Generate concise, on-message slide content and copy with AI, applying the 'one idea per slide' discipline.

What You Achieved (cont.)

7

AI slide design

Design professional slides with an AI slide generator and apply visual-design best practices.

8

Charts & data

Create clear, honest charts and data visuals from numbers with AI.

9

Images & speaker notes

Create on-brand images and per-slide speaker notes with AI.

10

Rehearse & deliver

Rehearse and deliver the presentation with confidence using AI as a rehearsal partner, and finalise and export the deck.

Keep Practising After the Course

1

Re-run the labs on your own machine — repetition is what makes the skills stick.

2

Apply the techniques to a real process or project in your own organisation.

3

Your course material stays available at <https://lms-tms.tertiaryinfotech.com/>.

4

Explore the follow-on courses at www.tertiarycourses.com.sg.

THANK YOU FOR ATTENDING

Thank You!

You now have the practical skills from every lab in this course — keep applying them to your own work.
